Summary

Oracle FLEXCUBE Technical Consultant at Techlogix delivering Core Banking solutions to tier-1 banks across CASA, Lending, ELCM, and PDM modules — including key technical contributions to Pakistan’s first conventional-to-Islamic banking conversion (122 branches migrated on-site). Strong PL/SQL and SQL tuning expertise complemented by full-stack engineering in Python/Django, Node.js, Next.js, and React. Built in-house automation tools that cut deployment review effort by ~30 minutes per change and reduced manual error rates. Open to remote consulting and contract opportunities with European banks and fintechs.

Experience

Technical Application Consultant, Techlogix – Islamabad, Pakistan July 2024 – Present

- Deliver Oracle FLEXCUBE production and staging support across CASA, Lending, ELCM, and PDM modules for tier-1 banking clients, owning issue analysis, PL/SQL fixes, and post-deployment validation.
- Served as on-site technical lead for Pakistan’s first conventional-to-Islamic banking conversion using Oracle FLEXCUBE; personally migrated **122 branches** and authored migration scripts the client uses to roll out remaining branches independently.
- Delivered **50+ FLEXCUBE customizations** end-to-end — requirement analysis, PL/SQL implementation, UAT, production deployment, and warranty support.
- Own configuration and ongoing production support for the PDM (Profit Distribution Module) for Islamic banking operations, including profit calculation rules and EOD reconciliation.
- Optimized recurring End-of-Day (EOD) batches and resolved month-end issues using PL/SQL tuning techniques (EXPLAIN PLAN, indexing strategy, bulk binds) — reducing turnaround time on critical incidents.
- Mentored **5 junior engineers** on FLEXCUBE customization workflows, PL/SQL best practices, and on-site delivery; serve as the liaison between client stakeholders, offshore developers, and QA.
- Coordinate releases through Agile delivery cycles using shared ticket and version-control workflows, ensuring smooth deployments and defect resolution.

Oracle APEX Developer Intern, eARMS GHQ, C4I Directorate – Islamabad, Pakistan July 2023 – Sep 2023

- Built a ChatBot application in Oracle APEX integrated with a machine-learning model trained on Excel data, enabling natural-language queries against operational records.
- Developed an Attendance Management System to automate record handling and reporting, replacing manual tracking workflows.
- Strengthened SQL, PL/SQL, and APEX skills through hands-on production-style project work.

Projects

QueryMind — AI-Powered Oracle SQL Optimizer & Assistant [GitHub] 2025

- Built a full-stack tool that introspects an Oracle schema (DDL, indexes, table/column statistics, constraints) and generates AI-driven query rewrites benchmarked against the original via MINUS set comparison.
- Authored three PL/SQL packages — QUERY_ANALYZER_PKG, RULE_ENGINE_PKG, VALIDATION_ENGINE_PKG — using EXPLAIN PLAN, DBMS_XPLAN, dynamic SQL, and ALL_TABLES/ALL_INDEXES/ALL_TAB_COL_STATISTICS catalog views to extract execution plans and metadata as structured JSON.
- Implemented a rule engine that flags Cartesian joins, redundant DISTINCTs, missing indexes, and other anti-patterns, and recommends indexes/triggers based on query shape and statistics.
- Designed a Next.js 16 + React 19 + TypeScript frontend with a hand-built SVG flowchart of the execution plan (no charting library), tabular plan view, and session-persistent chat UI.
- Integrated Google Gemini 2.5 Flash and Anthropic Claude APIs through a provider-abstraction layer; grounded

every LLM prompt with live Oracle metadata for schema-aware rewrites and accurate SQL/PL/SQL Q&A in Assistant mode.

- Stack: Oracle 19c, oracledb (thin), Next.js Route Handlers, Tailwind v4, Gemini API, Anthropic API.

Customization Units Manager — FLEXCUBE Deployment Automation Tool

2025

- Designed and shipped a cross-platform Electron + React + TypeScript desktop tool for FLEXCUBE on-site deployment teams to track, version, and validate customization units across raw and final environments.
- Cut review effort by **~30 minutes per change** by automating diff detection and removing the need for paired senior-junior reviews; reduced manual error rates during release prep.
- Integrated **Monaco Editor** (the VS Code engine) with jsdiff to provide a side-by-side conflict resolver with hunk-by-hunk merge selection for FLEXCUBE customization conflicts.
- Auto-generates deployment scripts from the approved customization set, eliminating manual script-assembly errors before production cutover.
- Packaged for Windows via electron-builder (NSIS installer + portable .exe) and distributed through GitHub Releases; fully local-first with JSON-file persistence (no backend, no DB).

FBR Invoice Integration System

2025

- Built a Node.js client-side invoicing system integrated with Pakistan's Federal Board of Revenue (FBR) e-invoicing APIs for real-time invoice submission and validation.
- Implemented secure API integrations, response validation, and structured error handling to ensure compliance with FBR regulations and audit requirements.
- Automated end-to-end invoice generation and reporting workflows, eliminating manual entry effort and improving accuracy.

Digital OBE System (Final Year Project)

2024

- Built a Flutter mobile app + Django REST Framework + MongoDB platform to digitalize the Outcome-Based Education (OBE) workflow for academic institutions.
- Integrated generative AI to auto-design course outlines with weekly topics mapped to Learning Outcomes (LOs), enforcing PEO/PLO consistency.
- Enabled teachers to create assessments traceable to specific LOs, improving structured academic planning and accreditation readiness.

Earlier Academic Projects

2023

- Python file encryption tool (symmetric + asymmetric); real-time TCP/IP chat application; Java desktop music player with directory-based song fetching.

Skills & Technologies

Core Banking & Oracle: Oracle FLEXCUBE (CASA, Lending, ELCM, PDM), Oracle Database 19c/12c, PL/SQL, SQL tuning & optimization, EXPLAIN PLAN / DBMS_XPLAN, Islamic banking operations, End-of-Day (EOD) processes, Oracle RAD Tool, Oracle APEX

Software Engineering: Python, Django, Django REST Framework, Node.js, TypeScript, Next.js, React, Flutter, Electron, REST APIs, MongoDB, Git, Docker

AI / LLM Integration: Google Gemini API, Anthropic Claude API, prompt engineering with structured outputs, schema-grounded LLM workflows

Practices: Agile delivery, code review, mentoring, client communication, technical documentation, production support, on-site implementation

Languages: English (IELTS 7.0 — Professional working proficiency), Urdu (Native)

Education & Certifications

National University of Sciences and Technology (NUST), BS in Software Engineering

2020 – 2024

CGPA: 3.62 / 4.00 | **Final Year Project:** Digital OBE System (see Projects)

The Complete PL/SQL Bootcamp: Beginner to Advanced PL/SQL — Udemy
(Database Masters Training / Code Star Academy), 26.5 hours

May 2025
